Summary

A fullstack web developer with an affinity for functional programming and interest in crypto looking for idk?

Experience

Elesy .

An app used to track .

Fullstack development(Metalamp)

Datalight - a platform . Basic tasks.

(MVP's front-end for a cryptocurrency service. Data analytics and visualization with large data tables and a widget system)

Rocket compute - .

Devexperts, as part of Metalamp

Finosoft - forex trading platform.

Avatrade - forex trading platform.

Juspay, as part of Metalamp

Credit - a plaform used to facilitate .

Cardano(IOHK), as part of Metalamp

Plutus pioneers program, which included developing two use cases - lending pool and nft markeplace.

Open source libraries and pet projects

A suite of tools and libraries created as a result of working with devexperts, aiming to ? and provide a base for development:

- medium - state management library/pattern.
- fp-ts-adt - various extensions and abstractions built on top of fp-ts.
- rx-js-utils - several useful abstractions for rxjs.
- react-utils - tools and utilities routinely used in react development.
- redux-unit(<https://github.com/performanceArtist/redux-unit>) - library used to generate reducers and action creators for redux. Developed during RocketCompute project to deal with the redux boilerplate. Successfully used throughout the project's development.
- binance-api, trading indicators - ongoing project. These two dependencies are required to make .

Languages

- Typescript
- Haskell

Stacks

- React + Redux + Redux saga + Typescript
- React + RXJS + fp-ts + Typescript
- Haskell + Postgres
- Haskell(plutus) + purescript
- Haskell(plutus) + typescript

Skills

- Backend/Frontend development
- Functional programming
